Arctic S111 BT White Mobile Bluetooth V4.0 Sound-System

Product Overview

Arctic S111 BT Mobile Bluetooth V4.0 Sound-System with 2 x 2 W RMS - White, 6 months Limited Warranty

Specifications

Features:

Be accompanied by your music
Portability is key with the S111 BT. The mobile sound-system with its large rechargeable Lithium-polymer battery is the ideal companion for your smartphone, tablet or laptop. For optimal protection a hard case is included.

Experience little Sound Wonders
The wow effect is guaranteed! With unexpected powerful sound quality, the cube duo does not only outdo any conventional laptop speakers but also guarantees full sound enjoyment on the go. Thanks to a 80cm cable even a true stereo experience is possible.

Lossless Streaming for Best-in-Class Sound Quality
Bring out the best in your music. A highend Bluetooth chipset of the latest generation allows lossless audio streaming of MP3 and AAC. So you never miss a detail and you can listen to your songs with a new spectrum of tonal possibilities - completely wireless.

Gone out flat? Never again
Flat batteries are a problem of the past. With the battery level indicator you always know how much juice you have left in your battery.

Forget about Time
With a 12 hour battery life, you will have plenty of time to love the S111 BT. You can get a refill with just 4 hours hooked to a USB port.

Get independent
Eliminate all troublesome wires and enjoy stable and lossless streaming by Bluetooth v4.0.

Demonstrate Style
Take the S111 BT out in style to any party or just keep in your living room. Thanks to the fun color choices of these speakers you can make a fashion statement everywhere you take them.

50% Higher Range
The S111 BT comes with a built in high gain antenna which enables a significantly extended range compared to standard Bluetooth devices. In combination with a Smartphone a typical Bluetooth module achieves a theoretical range of 10 m which, due to obstacles, can in praxis drop to below one meter. The S111 BT allows a stable connection even at a weak signal and offers thus a significantly extended range of about 50%.
