AJX-BTN

Ajax Wireless Alarm Button / Smart Button - White

Product Overview

Ajax Wireless alarm button / smart button - White, Configuring in the Ajax Mobile and Desktop apps

Specifications

Overview Summary:

The Ajax Wireless Alarm Button is a compact and versatile smart button that instantly alerts your security system or armed response when pressed, making it ideal for homes and businesses in South Africa who want reliable safety and automation control. Easy to pair with your Ajax hub using the QR code and configure in the Ajax mobile or desktop app, this wireless button supports panic alerts, appliance control, fire alarm muting and more. Its durable and weather-resistant design makes it suitable for various indoor and outdoor settings - buy now to add a smart safety control solution to your security setup.mivanta.com+1

Designed for everyday use, this smart panic button also controls smart home scenes like lights or appliances with a short or long press, and it works reliably with a long-lasting pre-installed battery for up to years of use. With simple installation and enabling on your security system, shop now to enhance your safety and automation with this easy-to-use device.mivanta.com

Performance tier: Premium compact security accessory

Uses: Panic alerts, Smart home control, Emergency notification, Fire alarm silence

Overview:

Ajax Wireless Alarm Button and Smart Control in White
The Ajax Button is a compact wireless alarm button and smart control device designed for fast response and simple automation. It supports three operating modes including Panic, smart device control, and fire alarm muting, all configurable remotely in Ajax mobile and desktop apps. The button activates instantly without needing to wake the device and includes protection against accidental presses through double or long press options. Pairing with the Ajax security system is quick and secure using a QR code.

Description:

A versatile wireless button for security alerts and smart home control, the Ajax Button allows instant emergency notifications, easy automation of appliances, and quick silencing of fire alarms. With long range encrypted communication, durable construction, and flexible mounting or carrying options, it delivers reliable performance for homes, offices, and commercial spaces.

Features:

One Button, Multiple Actions
Designed to adapt to different situations, the Ajax Button operates in a single selected mode at a time, which can be changed remotely by an authorized user in the Ajax app. This flexibility makes it suitable for personal safety, building management, and everyday automation.

Emergency Alerts Made Simple
In Panic mode, the button immediately sends an alert to users and alarm monitoring companies. It can be configured to signal various event types such as intrusion, fire, gas, or auxiliary alarms. Custom events can also be set for notifications that stay within the user system, allowing tailored responses without unnecessary escalation.

Smart Control for Daily Routines
When used for automation, the button controls relays, sockets, lighting, and other smart devices. Different actions can be assigned to short, double, or long presses, enabling simple control of multiple appliances without opening an app. One press can turn lights on, while another can shut everything down when leaving a room.

Instant Fire Alarm Muting
The device can silence interconnected fire alarms in seconds. Pressing the button during the delay phase hushes the triggered detector, while subsequent presses manage system wide sirens if the alarm has already spread. This helps reduce stress while maintaining safety awareness.

Built to Prevent False Alarms
The recessed design helps avoid accidental activation, even if the button is pressed unintentionally. Additional safeguards allow configuration so alarms trigger only with a long or double press, reducing false alerts in busy environments.

- Recessed button design to avoid unintended presses
- Optional long or double press activation

Reliable Performance Anywhere
With an IP55 rated enclosure, the Ajax Button resists dust and water and performs reliably in a wide range of environments. It can be worn on the wrist, carried on a key ring, or mounted using an optional holder, making it suitable for mobile or fixed use.

- Portable or surface mounted usage
- IP55 protection against water and dust
- Operating temperature from -10 C to +40 C

Long Lasting Wireless Convenience
Powered by a pre installed battery, the button operates for up to five years. The system automatically checks battery status daily and sends early warnings through the Ajax app, allowing maintenance without interrupting operation.

Secure Long Range Communication
Using the Jeweller radio protocol, the button communicates with the hub over distances up to 1300 m in open space. Two way encrypted communication and dynamic keys protect against data theft, spoofing, and interference.

- Encrypted two way radio communication
- Alerts for jamming and connection loss
- Stable operation with Ajax hubs and range extenders

Scalable System Support

For larger or more complex sites, Ajax range extenders expand coverage and maintain reliable communication through obstacles like concrete or steel. This makes the button suitable for multi storey buildings, offices, and commercial facilities.

System Monitoring and Protection
The button performs regular self checks and reports its status to the hub daily and with every press. Any communication loss or malfunction is reported immediately, ensuring fast response and continuous system awareness.

Fast Setup and Flexible Placement
Adding the button to an Ajax system takes only seconds by scanning the QR code in the app. Its compact design and durable housing allow it to be clipped, worn, or mounted almost anywhere, delivering quick access to security and automation controls whenever needed.
