Installation Specifications
To ensure a secure fit within your existing infrastructure, please verify that your rack meets specific dimensional requirements before installation. The kit requires a minimum post width of 450 mm and a panel width of at least 480 mm to accommodate the mounting hardware properly. The supported rack mounting depth ranges from 553 mm up to 834 mm, making it compatible with most standard server racks in the industry.

In addition to dimensional constraints, the mounting holes must adhere to specific size guidelines to ensure stability. Square holes must measure at least 9.5 mm by 9.5 mm, while round holes require a minimum diameter of 7.1 mm. These precise tolerances guarantee that the rails lock securely into place without wobbling.
