Powerful CPU Transmits Data in No Time
The new Wi-Fi 6 chip with a 4-nm made process delivers amazing powers and an impressive efficiency bump, enabling RE3000 to handle intensive transmission tasks such as online gaming streams and 4K live feed and maintain responsive.

Faster Wi-Fi 6 Eliminates Throttling
Equipped with Wi-Fi 6, RE3000 boasts the highest 160 MHz bandwidth and 1024-QAM to reach up to 3 Gbps speeds, which is more than 2.5X faster than the last-gen AC 2x2 RE. This high throughput allows massive amount data including your 4K video streaming hopping to end-devices without throttleing.

Direction Detected, Signal Boosted
Beamforming detects the direction of connected devices and forms a focused signal towards them to improve coverage.

Connect More, Stay Fast
The upgraded Wi-Fi 6 standard features downlink and uplink MU-MIMO and OFDMA, transmitting a massive amount of data for multiple devices in no time. This reduces the latency and enhances Wi-Fi capacity, enabling more immersive online gaming and smoother video calling.

Share Internet through Wired Connections
A Gigabit Ethernet provides 10x the speed of the ordinary non-gigabit one. This enables turning existing wired connections into a Wi-Fi hotspot. You can also use it as a LAN port to share internet through wired connection to TV in your bedroom or printer which lacks Wi-Fi module.

Encrypts Wireless to the Best Level
The latest Wi-Fi security protocol, WPA3, brings new capabilities to improve cybersecurity in personal networks. More secure encryption in Wi-Fi password safety and enhanced protection against brute-force attacks combine to safeguard your home Wi-Fi.
