Specifications

Features:

The master in curved screens
Samsung is the master of curved screens and has been the market leader since the company first introduced the innovative displays in 2015. With an industry-leading technology in a full range of displays, Samsung's curved displays have consistently the largest market share and are consumers' first choice.

Let yourself be surrounded by the curves
Born to win. Let yourself be completely surrounded by the deep arc in the screen 1800R, and forget everything around you. Win more as the sharp focus on the screen increases your ability to concentrate. Play for a long time without getting tired of your eyes.

Smooth, fast scenes
Moving movements and clear images in all scenes. With a refresh rate of up to 144Hz, you are one step ahead in even the most demanding games. Spot the enemy instantly, and even notice very small but crucial changes in the individual scenes. The frequency can easily be changed to 60Hz, 100Hz or 120Hz.

Exclusive to gamers
Get the optimal game settings. Game Mode optimizes the black gamma levels, contrasts, sharpness and colors of any game genre. A low load delay minimizes delays between your input devices and the display. The virtual Aim Point feature centers the target on the screen and makes it easier to correct precise attacks against the enemy.

Play without backlash and blur
Tip goodbye to choppy gaming experiences. FreeSync eliminates delays and backlogs, giving you an exceptionally fast, non-transitory gaming experience. With a dynamically customized refresh rate, even the most complex game scenes become fluid and virtually unobtrusive.

Win more with fresh eyes

Play even further. Eye Saver Mode minimizes the blue light enough for the eyes to relax even if you play for a long time. Flicker Free technology continuously removes tiring and annoying screen flicker so you can focus longer without distractions and without getting tired of eyes.

Look clearer in the dark

Make it impossible for the enemy to hide. The 3,000: 1 astronomical contrast ratio allows you to see dangerous objects and enemies with greater clarity. The black color is even deeper and the white is even cleaner with more and clearer shades in between. Even when the enemy hides in the dark, you quickly mock him before it's too late.
