Fujitsu 2D Barcode Module for PaperStream

Product Overview

Fujitsu 2D Barcode Module for PaperStream, PaperStream plug-in for 2D barcode

Specifications

Features:

The right solution for small-document scanning

The compact, lightweight fi-65F high-speed scanner is ideal for front office, reception, patient intake, and retail environments. It quickly scans all major types of identification and small cards, including driver's licenses, passports, military IDs, insurance cards, credit cards, photos, and small survey forms.

Fast, reliable scanning performance for better productivity

High-speed USB 2.0 connectivity combines outstanding performance and easy installation. PaperStream IP Cleanup drivers (TWAIN and ISIS) and PaperStream Capture scanning software are included to simplify integration and boost productivity right from the start.

No time, no cover, no problem

The fi-65F scanner increases user productivity with fast, one-second scanning at 300 dpi and coverless scanning. Coverless scanning eliminates the repetitive task of opening and closing the cover before and after each scan while still auto-deskewing, auto-cropping, and auto-rotating the document. The scan button on the front of the scanner increases the speed of capturing multiple documents.

Capture the details you need in just one second

The fi-65F scanner delivers clean, crisp scans up to 105 mm x 148 mm (5.83 in. x 4.13 in.) -- in color, grayscale, and monochrome with true, 600-dpi optical resolution. However, when time is critical, users can scan documents at 300 dpi in

monochrome or 8-bit grayscale in just one second. And 24-bit color scans at 200 dpi take just 1.7 seconds.

PaperStream IP (32/64 Bit)

The PaperStream IP driver takes the work out of image cleanup when scanning invoices, ID cards, receipts, forms, or any other day to day paperwork. PaperStream IP automatically improves the image quality, removes unwanted backgrounds, and optimizes your scanned images for optical character recognition. It is fast and easy to use. Our latest innovation, Assisted Scan, allows users to replace poor images by visually selecting the image they lack rather than learning driver settings. If driver settings need to be adjusted for rare and difficult documents, our preview function allows scan operators to see their adjustments in real-time without time consuming re-scans. PaperStream IP works with both ISIS and TWAIN applications.

PaperStream Capture

PaperStream Capture makes advanced capture with Fujitsu scanners easier than before. PaperStream Capture has a streamlined User Interface to reduce training time and increase productivity. Not only have we provided users with the most common profiles used by customers-black and white, color, and auto-color-new profiles are easily created or modified through a wizard. We have organized the release screen so that batches can easily be suspended or continued. PaperStream Capture is also integrated with PaperStream IP's assisted scanning for visual cleanup of documents. The reading of barcodes and patch codes make batch separation easy, improving document organization.

High-impact scanning, low environmental impact

In keeping with Fujitsu's long-standing commitment to safeguarding the environment, the fi-65F is the latest business scanner to adhere to strictest ecological regulations throughout the entire manufacturing process. The design and manufacture of the fi-65F meet Energy Star's energy consumption requirements and the European Union's Reduction of Hazardous Substances and Volatile Organic Compounds regulations.
