Specifications

Features:

Muscular design matched with earthshaking sound
Dare to stand out with the new Samsung GIGA Sound Premium Hi-Fi Component Audio System. This year's design now features sharper masculine styling, intensified by a new hexagonal speaker design for an overall stronger and more powerful image. Impress your guests at the next party or your friends and family at the next get together with the tough look and sound of the Samsung GIGA.

Get ready to party with powerful sound and bass
The Samsung GIGA 9000 can make a big difference at your party. It delivers 3400W of sound that you can really hear and feel-a sound experience so intense, it's like you're standing next to a helicopter. The rich bass comes with increased sound pressure level (SPL) made possible with a cloth wave edge unit that is boosted by the built-in 15" subwoofer.

Mix lighting effects with music to take your party to the next level
An awesome light show can be the difference between a great and a mediocre party. The Samsung GIGA mixes vibrant lighting effects with your music so there's no need for any additional equipment to create a rockin' atmosphere. In addition to having its own built-in lighting effects, the GIGA also features Samsung's enhanced Beat Waving II that lets you choose from a great range of electrifying patterns that pulse to the beat of the music. Are you ready to become the life of the party?

You can be the DJ and rock the party
Make sure everyone remembers your party. Anyone can be the DJ with the new Samsung GIGA. Use common audio effects like chorus, phaser, flanger, tremolo, and slapback delay, and even filter and spatial effects like wah-wah, fuzz, and panning. You can even apply up to two audio effects simultaneously for more amazing sound possibilities. Control the tempo with the DJ jog dial and remove breaks between tracks with Non-Stop Music Relay to play your music seamlessly.

Put the fun of the party at your fingertips

Your mobile device can exhilarate your party even more. With just a quick free downloadable application*, you can customize your party experience from the palm of your hand. The app provides basic controls like power, volume, and custom EQ for every model. Change the color of the speaker lighting from your phone on models from the J6500 series and up. Make instrument effects, mix DJ effects, and adjust song tempo on your phone on models from the JS8000 series. It's time to party.

Maximize every party with your own customized beats
Create your own popping beats to your party music. GIGA Beat lets you add your own percussion effects to the music at your party by simply tapping on the built-in beat pads. 7 different instrumental sound effects are at your fingertips so you can mix percussions any way you want to the music that will rock your party. Whether it's a bongo, conga, or acoustic drum effect, surprise your guests with a unique tempo and rhythm they'll never forget.
