Kaspersky Internet Security 4 Users 2014 Retail pack

Product Overview

Kaspersky Internet Security 4 users - 2014, with protection against new and unknown threats: hourly automated database updates + preliminary behaviour analysis + On-going behaviour analysis; personal firewall, advanced parental control, safe surf, safe run mode for suspicious app & site, anti-spam + anti-banner, application control and sand boxing, digital Identity protection - retail pack

Specifications

Overview:

Along with the benefits of online shopping, banking and social networking, the growth in web-based activities has brought a corresponding growth in the viruses and complex Internet threats that can compromise the security of your PC and your valuable, personal information.

Kaspersky Internet Security 2014 combines a vast array of easy-to-use, rigorous web security technologies that protect you against all types of malware and Internet-based threats - including cybercriminals that try to steal your money or your identity. Kaspersky Lab brings you hassle-free security that has minimal impact on your computer's performance. Your PC and all the precious files and data stored on it are kept safe by:

- Anti-Malware Protection - for real-time defences against computer viruses and Internet threats
- Internet Protection - to secure your data and your money when you're banking, shopping or surfing online
- Identity Protection - via Kaspersky's Virtual Keyboard and Secure Keyboard technologies
- Anti-Phishing Protection - to prevent cybercriminals from collecting your personal information
- Advanced Parental Control - that helps keep children safe when they're online

Features:

Defending you against malware and Internet threats - Improved!
Building on Kaspersky's award-winning anti-malware technologies, Kaspersky Internet Security 2014:

- Protects your PC against all types of malware - including computer viruses, worms, Trojan viruses, bots, spyware... and more
- Combines the real-time efficiency of the cloud, plus powerful security technologies running on your PC - to deliver a faster, more effective response to today's complex malware and Internet threats
- Includes Kaspersky's new ZetaShield technology - for even better protection against unknown malware and exploits

- Works behind the scenes to ensure your PC and data are safe - while you enjoy the Internet to its full potential, without disruption or any significant impact on your PC's performance

Protecting your money against thieves and cybercriminals - Improved!
With your money and personal information potentially at risk, online banking and shopping requires an extra layer of Internet protection. Whenever you visit a banking, payment or shopping website, Kaspersky's unique Safe Money technology:

- Ensures the website is secure - and that you're not being tricked by a fake or fraudulent website
- Offers to open the website in a special, protected mode - to keep your credit card number and personal data safe from cybercriminals

Preventing the interception of your passwords and banking details - Improved!
Because criminals have developed ways to capture the information that users type on their computer keyboards, Kaspersky Internet Security 2014 has been designed to:
Provide you with two security technologies that protect your personal information when you enter it online:

- Secure Keyboard and
- Virtual Keyboard

Protecting you against identity theft and suspicious websites - Improved!
Cybercriminals are using increasingly sophisticated ways to infect users' computers or steal personal information - so that they can take over their victims' identities and commit fraud. Kaspersky Internet Security 2014:

- Uses the latest cloud-based and proactive anti-phishing technologies - to prevent you from being tricked into providing valuable personal data to phishing websites
- Displays colour-coded tags next to all web links - to advise you of the danger level of the link and subsequent pages

Ensuring the applications on your PC are safe - Improved!
If the operating system or any applications running on your PC haven't been updated with the latest fixes, they could be vulnerable to malware attacks. Kaspersky Internet Security 2014 scans your PC for these vulnerabilities and:

- Analyses and controls the actions of any programs that contain vulnerabilities - to prevent harm being caused
- Gives you the option of blocking all untrusted applications - so only programs that Kaspersky guarantees to be safe are allowed to run on your PC

Maintaining your PC's performance - Improved!
Effective anti-malware and Internet security doesn't have to impact your PC's performance. Kaspersky Internet Security 2014 has been optimised for performance, so it:

- Protects your PC without constantly disturbing you with questions and alerts
- Checks the reputation of all the applications and websites you launch, analyses program behaviour, updates its own malware database, and more - all without any significant effect on your PC's performance

Keeping children safe and responsible online - Improved!
With the Internet holding so many risks for children, it's vital that they are protected against a wide range of online threats. Kaspersky Internet Security 2014 includes award-winning Parental Control technology that:

- Keeps children safe when they're online - emailing, downloading files, surfing the Web, using social networking sites... and more
- Makes it easy for you to manage and control how children use the Internet, when they use it, and who they communicate with via the Web

Innovative hybrid approach - delivering real-time anti-malware protection
With over 200,000 new malicious programs appearing every day, it's vital that your PC has the best in anti-malware protection. Kaspersky Internet Security 2014 combines traditional, proactive and cloud-based anti-malware technologies to deliver real-time defences:

- Antivirus protection
- Kaspersky's latest anti-malware engine protects PCs against all types of malware, including:

- Computer viruses
- Worms
- Trojan viruses
- Spyware
- Rootkits
- Bots… and more

Cloud-based protection
To deliver a rapid response to the emergence of new malware, Kaspersky also uses cloud-assisted techniques. The cloud-based Kaspersky Security Network (KSN) continually gathers information about new malware threats from millions of consenting users' computers. This information enables Kaspersky to protect its customers against the very latest threats without having to wait for a new malware signature to be added to the malware database on customers' PCs. Even if you don't consent to KSN automatically collecting threat information from your computer, your PC will still benefit from KSN's ability to deliver a more rapid response to new and emerging malware.

Automatic Exploit Prevention
Even if your PC - and the applications you run on it - have not been kept up to date with the latest patches and fixes, Kaspersky Internet Security 2014 can prevent exploitation of vulnerabilities by:

- Controlling the launch of executable files from applications that contain vulnerabilities
- Analysing the behaviour of executable files - to identify similarities with malicious programs
- Restricting how applications that contain vulnerabilities are allowed to operate

Trusted Applications Mode
This new Kaspersky security technology uses information from Kaspersky's Whitelisting Service to restrict which applications are allowed to run on your PC. Kaspersky is the only Internet security software supplier that has its own Whitelisting Lab. The lab assesses applications to establish whether they are safe for customers to run on their computers. When you enable the Trusted Applications Mode, only applications that Kaspersky designates as 'trusted' will run on your PC. All other applications will be restricted.

Protection against screen lockers
Blocker Trojan viruses can prevent you from using your PC until you pay 'ransom' money for the blocker's restrictions to be removed. If a cybercriminal ever uses a Blocker Trojan to try and take control of your PC, just activate Kaspersky's protection against screen lockers and Kaspersky Internet Security 2014 will:

- Stop any dangerous processes
- Launch the necessary treatment procedures

System Watcher
In the unlikely event of malware finding its way onto your PC, Kaspersky's unique System Watcher technology will:

- Detect dangerous behaviour on your PC
- Enable you to undo or roll back most types of malicious action

Optimised antivirus databases
With Kaspersky Internet Security 2014, your PC only needs to store relatively small antivirus databases. This helps to:

- Minimise the impact on your computer's performance
- Reduce the time taken to install and update your Kaspersky security software

Internet protection - defends you against sophisticated, web-based malware attacks
Every month, hundreds of millions of web-borne infections and network security attacks are blocked. With Kaspersky Internet Security 2014 running on your PC, you're free to enjoy the Web to the fullest extent… without constantly having to worry about Internet-based threats:

URL Advisor

Kaspersky URL Advisor uses cloud-based data about the reputation of websites to alert you about links to suspicious and dangerous sites. Colour-coded indicator icons show you whether a link is:

- Trusted
- Suspicious, or
- Dangerous

Anti-phishing protection
Kaspersky's anti-phishing engine - and its regularly updated anti-phishing database - defends you against Internet fraudsters' attempts to access your personal information.

Anti-spam protection
Kaspersky Internet Security 2014 reliably filters out unwanted messages and delivers reports about any detected spam.

Safe Money - protects your money when you're online banking or shopping
With Kaspersky Internet Security 2014, whenever you attempt to log in to an online bank, payment system website or shopping website, Kaspersky's unique Safe Money technology protects your money and your personal information, by:

- Comparing the website's URL against a database of secure websites
- Checking the certificate used to set up the secure connection, to prevent you being directed to a fake site
- Checking your PC for any operating system vulnerabilities that could affect online banking
- Automatically offering to open the website in Kaspersky's special Safe Money mode - for an extra level of security against the theft of your personal and financial information.

The latest version of Safe Money also gives you:

- A choice of web browsers that can be used for Safe Money activities
- An extended list of websites that are already supported by Safe Money - and the option to add further sites to the list

Secure Keyboard and Virtual Keyboard - protect your data from keyloggers
Because cybercriminals use keylogger programs and screen-capture malware to record the keys that you press to enter your bank account details, credit card number or other valuable information, Kaspersky Internet Security 2014 includes two special security technologies:

Secure Keyboard
Whenever you visit a bank or payment website - or enter a password within any web page - Kaspersky's Secure Keyboard feature is automatically activated. Secure Keyboard lets you enter data via your PC's physical keyboard, safe in the knowledge that your information cannot be accessed by keyloggers.

Virtual Keyboard
Instead of using your keyboard to enter sensitive information - such as passwords and account details - the Virtual Keyboard feature lets you use mouse clicks to enter data so your valuable information can't be tracked or stolen by keyloggers, hackers or identity thieves.

Optimised for ease of use and performance
If security software is simple to set up and manage, it's more likely to be used more effectively. Kaspersky Internet Security 2014 is designed to provide you with easy-to-use PC protection that doesn't drain your PC's performance:

Improved user interface
The main display window has been updated to comply with the latest thinking on efficient user interfaces.

Streamlined settings
Only frequently used settings are included on the main interface - so they're easier to use and navigate.

Redesigned and revised scan features

The application's redesigned Task Manager makes it easier to view the status of scanning processes and to see how security processes are making use of your PC's resources.

Optimised for Windows
Kaspersky Internet Security 2014 has been optimised for Windows 8.

Fast start-up, shutdown and reaction times
Kaspersky Internet Security 2014 has been optimised to deliver:

- Rapid start-up
- Faster shutdown time
- Quicker reaction to the Kaspersky security commands and settings that you select

Low consumption of PC resources
Kaspersky Internet Security 2014 has minimal impact on:

- Network activity
- The installation of programs
- The launch of web browsers
- The launch of applications
- In addition, a special Gamer Mode ensures an uninterrupted gaming experience - while still keeping you secure.

Uses less battery power
When it's installed on a laptop that's running on battery power, Kaspersky Internet Security 2014 automatically limits its use of resources so your laptop can operate for longer periods without recharging.

Award-winning Parental Control technologies
Kaspersky Internet Security 2014 provides Internet safety for kids by giving you flexible control over your children's use of both the PC and the Internet:

Controls for Internet usage

- Monitor and limit children's Internet usage
- Block Internet usage for a specified number of minutes every hour
- Prevent access to inappropriate categories of websites - or to individual websites
- Block specific types of download - including video files, music and applications

Controls for social networking

- Control communications on social networks
- Block any unwanted contacts
- View the time and date that new contacts were added on social networks

General controls

- Apply different restrictions for specific days, times of day or hours per day
- Block specific applications or groups of applications, such as games
- Prevent the sharing of private data - including phone numbers and credit card numbers
- Generate reports that give you more detail about children's PC and Internet usage

Predefined user profiles
By providing a set of predefined user profiles - including 'Child' and 'Teenager' - Kaspersky Internet Security 2014 makes it easier for you to activate appropriate Parental Control settings for each child.

Game ratings
A special game ratings feature makes it easy to block or allow access to specific games depending on ratings held in a

database on the PC and in the cloud. A game's rating is based on a number of parameters, including the:

- Child's age
- Type of game
- Content of the game - for example, whether it includes violence or the use of weapons

Specifications	
Product Code	SF-KiS414
Operating Systems*	Microsoft Windows XP Home Edition (Service Pack 3 or higher)
	Microsoft Windows XP Professional (32-bit) (Service Pack 3 or higher)
	Microsoft Windows XP Professional (64-bit*) (Service Pack 2 or higher)
Hardware Requirements	Processor: 800 MHz or higher
	512 MB available RAM
Operating Systems*	Microsoft Windows Vista Home Basic (32-bit/64-bit*) (Service Pack 1)
	Microsoft Windows Vista Home Premium (32-bit/64-bit*) (Service Pack 1)
	Microsoft Windows Vista Business (32-bit/64-bit*) (Service Pack 1)
	Microsoft Windows Vista Enterprise (32-bit/64-bit*) (Service Pack 1)
	Microsoft Windows Vista Ultimate (32-bit/64-bit*) (Service Pack 1)
	Microsoft Windows 7 Starter (32-bit)
	Microsoft Windows 7 Home Basic (32-bit/64-bit*)
	Microsoft Windows 7 Home Premium (32-bit/64-bit*)
	Microsoft Windows 7 Professional (32-bit/64-bit*)
	Microsoft Windows 7 Ultimate (32-bit/64-bit*)
Hardware Requirements	Processor: 1 GHz or higher
Operating Systems*	Microsoft Windows 8 / Pro / Enterprise (32-bit/64-bit*)
Hardware Requirements	Processor: 1 GHz or higher
	1 GB available RAM (32-bit) or 2 GB available RAM (64-bit)
Required for all installations	Approximately 480 MB free space on the hard drive (depending on size of antivirus database)
	CD/DVD drive for installation of the program from CD ROM
	Computer mouse
	Internet connection for product activation and updates
	Microsoft Internet Explorer 8 or higher
	Microsoft Windows Installer 3.0 or higher
	Microsoft .NET Framework 4

Hardware Requirements for Netbooks	CPU: Intel Atom 1.6 GHz
	RAM: 1 GB DDR2
	Hard Disk: 160 GB
	Video Card: Intel GMA950
	Screen: 10.1 inch, 1024x600 widescreen
	Operating System: Microsoft Windows XP Home Edition
